1. The following is an examiner's statement of reasons for allowance:

Prior arts of record do not disclose a vehicle driving apparatus and method in which an auxiliary device is connected to a side of the drive shaft of the engine and is arranged at an outer periphery of the engine and at opposite side to the output shaft; a motor generator is located at an outer periphery of the engine to a side of the drive shaft and on a side opposite to the output shaft side; a connecting mechanism connects the motor generator to the auxiliary device for selectively connecting the motor generator to the engine; an auxiliary device driving means enables the connecting mechanism to disconnect the motor generator from the engine and drives the auxiliary device through the motor generator in response to a request to drive the auxiliary device when the engine is maintained in an automatically stopped state; a vibration suppressing means controls rotation of the drive shaft in the stopped state through the motor generator for suppressing vibration caused by stopping of the engine when the engine stopping condition is satisfied; independent claims 1, 21, 23, and 25 further teach other components with specific arrangement.
